

# Worksheet

<b>1.Environmental impact and water pollution:</b>	Observing the images of polluted rivers, what do you think might be causing this pollution? What are the consequences for people's health and the environment?
<b>2.Access to clean water:</b>	In one of the images, people are collecting clean or dirty water. What challenges do communities without direct access to potable water face? How is this linked to diseases?
<b>3.Connection between hygiene and health:</b>	Based on the images showing agricultural practices and hands being washed with clean water, why is maintaining good hygiene especially important when handling food?
<b>4.The role of agriculture in water access:</b>	Look at the images of farmers in the fields. How do you think water availability impacts food production and, consequently, food security in these regions?
<b>5.Solutions for hygiene and sanitation:</b>	Thinking about the images of doctors and shops, what role can healthcare professionals and available market resources play in improving hygiene and preventing diseases in rural communities?
<b>6.Equity in water access and distribution:</b>	Some images show women and children collecting water. Why do you think these tasks fall on certain groups? What could be done to ensure a more equitable distribution of water?
